

Kit Plummer

Technology Executive & Engineering Advisor

[Download PDF](#) | kitplummer@gmail.com | [LinkedIn](#) | [GitHub](#) | +1 404 229 3233

Profile

Technology executive and modernization advisor who drove \$28M+ in federal technology transformations, specializing in data modernization, edge computing, and secure distributed systems. Led organizations through enterprise-scale DevSecOps transformations, data synchronization architectures, and cloud-to-edge data modernization initiatives for defense and intelligence agencies. Proven track record building high-performing teams, securing strategic funding, and translating complex communications and data infrastructure challenges into actionable business outcomes. Expert in zero-trust architectures, real-time data pipelines, and mission-critical system modernization. Current TS-SCI clearance.

Skills

EXECUTIVE & ADVISORY CAPABILITIES

- **Data Modernization Strategy:** Cloud-to-edge data architecture, distributed systems transformation, real-time data pipelines, data synchronization at scale, legacy system modernization
- **Digital Transformation Leadership:** Enterprise DevSecOps transformation, infrastructure modernization, organizational change management, technical debt reduction
- **Strategic Business Development:** Multi-million dollar contract acquisition (SBIR/STTR, STRATFI awards), go-to-market strategy, defense/intelligence contracting, executive stakeholder engagement
- **Technology Leadership:** Cross-functional team building, distributed workforce management, C-suite advisory, thought leadership, conference speaking

TECHNICAL EXPERTISE

- **Data & Infrastructure:** Distributed data systems, peer-to-peer synchronization, data integration pipelines, cloud platforms (AWS, Azure Government), Kubernetes, Infrastructure-as-Code
- **Security & Compliance:** Zero Trust Architecture, software supply-chain security, vulnerability assessment, SBOM generation, multi-level security systems
- **Modern Development:** Rust, Golang, JavaScript/TypeScript, Python, Java, Ruby, AI/ML pipelines, edge computing, mobile platforms (iOS/Android)
- **DevSecOps & Automation:** CI/CD pipelines, GitOps, automated testing, continuous delivery, infrastructure automation

Experience

Ditto | *Chief Engineer, Federal* | **2023-present**

Led data modernization strategy and execution for federal defense and intelligence customers, transforming legacy data architectures into cloud-to-edge distributed systems.

- Architected Common Operational Datasync capability (recognized by Defense Innovation Unit Success Memo), modernizing data synchronization across heterogeneous platforms, eliminating legacy configuration requirements, and reducing operational costs through real-time peer-to-peer data flows
- Secured \$28M STRATFI (Strategic Funding Increase) award by demonstrating strategic value of data modernization initiatives supporting National Security objectives
- Delivered TAK Edge Sync plugin to TAK.gov, modernizing tactical data sharing infrastructure for special

- operators globally through resilient offline-first synchronization architecture
- Developed go-to-market strategy for federal data modernization initiatives spanning cloud operations, edge integration, and mobile deployments—driving funding raises and organizational growth
- Led cross-functional teams (program managers, engineers, customer success, business development) through complex data infrastructure transformations across iOS, Android, Rust, and JavaScript platforms
- Drove innovation in AI-enabled data pipelines with patent filings for anomaly detection and distributed model retraining, modernizing legacy machine learning operations
- Advised defense and intelligence leadership at operational exercises, test events, and strategic conferences on data modernization approaches and distributed architecture benefits

Microsoft Federal | *Director, Modern Software Engineering and DevSecOps* | **2022-2023**

Advised federal agencies on cloud data modernization and DevSecOps transformation strategies, creating and executing Microsoft's Azure Government Cloud go-to-market approach for engineers, developers, and researchers within the federal partner ecosystem. Guided organizations through secure cloud data migration, CI/CD pipeline modernization, and infrastructure-as-code adoption.

Georgia Tech Research Institute (GTRI) | *Principal Research Engineer* | **2017-2022**

- Chief Engineer for Air National Guard/Air Force Reserve Test Center's Corsair Ranch software factory, modernizing legacy military aviation data pipelines and development infrastructure for F-16, A-10, HH-60 platforms through Platform One integration
- Developed software supply-chain risk analysis tooling (lowendinsight.dev) for large-scale vulnerability assessment, modernizing security evaluation processes across distributed development teams
- Chief Engineer for Delta Airlines' In-Flight Entertainment system modernization on Airbus A330-900 fleet, leading cross-organizational transformation of passenger data and content delivery infrastructure
- Established DevUP organizational improvement function, advising leadership on DevSecOps transformation strategies; taught *DevSecOps and Military Applications* at GT Professional Education
- Led strategic business development, published thought leadership, and advised executive audiences at industry conferences on software factory and data infrastructure modernization

Ion Channel | *Founder/CTO* | **2015-2017**

Founded and led cybersecurity startup, securing \$1M+ in intelligence community contracts through innovative data-driven approach to software supply-chain security and vulnerability assessment.

- Built and scaled engineering team focused on product-oriented development, establishing organizational processes and technical strategy
- Designed microservices-based data aggregation platform on AWS infrastructure, modernizing how intelligence agencies assess software supply-chain risk
- Architected data integration pipelines connecting disparate sources (NIST NVD, language ecosystems, GitHub) into unified data warehouse for real-time vulnerability intelligence
- Developed API, CLI, and UI platforms enabling governance, risk, and compliance teams to modernize security operations through data-driven decision-making
- Implemented continuous delivery infrastructure automating data pipeline updates and artifact delivery to operational environments

AirGap / RadiantBlue Technologies | *Chief Engineer* | **2012-2015**

Advised defense and intelligence organizations on enterprise modernization, infrastructure transformation, and data architecture evolution.

- Consulted C-level executives on organizational transformation strategies to accommodate technology change, prevent technical debt, and enable data-driven decision-making
- Analyzed legacy processes and infrastructure, identifying modernization opportunities and automation strategies
- Led technical training and advisory on infrastructure-as-code (Puppet, Chef, Ansible) and cloud/container platforms (OpenStack, Docker)
- Served as board member at The Codice Foundation, advancing open source adoption in defense systems

- Architected Distributed Data Framework deployments, modernizing large-scale geospatial intelligence data infrastructure through automated provisioning on AWS and private cloud

Led development of workflow automation platform modernizing software delivery for intelligence agencies:

- Designed and implemented hybrid cloud infrastructure (OpenStack, Docker, AWS) for elastic compute and resilient data storage
- Architected workflow engine for distributed operations using modern data stores (MongoDB, PostgreSQL) and process orchestration (Activiti, Grails)
- Built data integration microservices (Ruby) aggregating security intelligence from NIST, VirusTotal, and other sources
- Modernized security audit and compliance workflows through automated component manifesting and artifact delivery pipelines

MaestroDev | *VP, Product Engineering* | **2011-2012**

Led product engineering strategy and execution for DevOps automation platform, modernizing enterprise software delivery workflows and data pipelines.

- Managed globally distributed engineering organization (software engineers, designers, technical writers, administrators)
- Advised executive stakeholders on product strategy, market execution, and operational transformation roadmaps
- Partnered with enterprise customers to optimize delivery pipelines, monitoring infrastructure, and operational data flows
- Architected workflow engine integrating SCM, CI, deployment, and configuration management tools—modernizing development-to-operations data exchange

Dozer Software LLC | *Principal* | **2000-2017**

- Provided rapid prototyping, system design, and software engineering services to local, defense and mining organizations

Accenture National Security Services | *Technical Architect* | **2007-2010**

Architected data modernization solutions for defense intelligence agencies, transforming legacy document processing and data discovery systems.

- Designed semantic intelligence platform for US ARMY CDI, modernizing document analysis through entity extraction algorithms and knowledge graph relationships (RDF/XML interconnects)
- Integrated distributed data processing frameworks (Grails, GATE, UIMA, Tika, Jena) into scalable publish-subscribe architecture for high-throughput intelligence workflows
- Architected dynamic data discovery and visualization platform for USAF (SAF), implementing advanced search algorithms for geospatial and multi-domain intelligence using modern frameworks (Grails, OSGi)
- Established open source contextual collaboration suite for USAF, evolving architecture from Java/OSGi to Ruby/Rails RESTful services—modernizing inter-agency data sharing
- Published thought leadership and advised defense audiences at conferences on open source adoption and data architecture modernization

Raytheon Missile Systems | *Principal Software Engineer / Systems Engineer* | **2003-2007**

- Architected tactically-aware service integration platform modernizing data exchange across defense systems using Enterprise Service Bus architecture
- Lead engineer for unmanned system mission computer platform, integrating real-time data processing and telemetry pipelines for flight operations
- Developed SDK enabling secure multi-level data access, providing APIs and tooling for distributed service development
- Co-chaired Communications Technology Interest Group, advising leadership on open source adoption and data interoperability standards

United States Air Force | *Wideband/Satellite Radio Technician* | **1990-1996**

Maintained and operated fixed and tactical communications and networking systems, ensuring reliable data and voice transmission for global military operations.

Early Career | *Systems Engineer, Instructor, IT Manager* | **1996-2003**

Systems Integration Plus (Systems Engineer), ITT Technical Institute (Adjunct Instructor), Pilot2Pilot Inc. (President), Marine Corps Community Services (IT Special Projects Manager)

Education

University of Maryland | Adelphi, Maryland | **December 2008**

Master of Software Engineering

University of Maryland | Kadena AB, Okinawa | **October 1999**

Bachelor of Science in Computer Studies

University of Arkansas | Camp Foster, Okinawa | **September 1999**

Completed training, course work and requisite projects for mid-level management certification

Green Hills Software | Tucson, AZ | **October 2003**

Completed training and certification for Integrity RTOS

Redhat | San Francisco, CA | **May 2001**

Completed RHCE training and certification

Wind River Systems | Alameda, California | **September 2001**

Completed coursework covering VxWorks 5.4 and Tornado 2.0

Activities

[OVMTB High School Mountain Bike Team](#), Founder and Board Member

[National Interscholastic Cycling Association](#), Level I Certified Coach
